IPCC steps up warning on climate tipping points in leaked draft report

Scientists increasingly concerned about thresholds beyond which recovery may become impossible

Fiona Harvey *and agencies*

Climate scientists are increasingly concerned that global heating will trigger tipping points in Earth's natural systems, which will lead to widespread and possibly irrevocable disaster, unless action is taken urgently.

VWS: onderonsjes met tabaksindustrie Stivoro: Dit is geen gelijk speelveld

Volgens minister Schippers (VWS) praat haar ministerie vaker met de anti-rokenlobby dan met de tabaksindustrie. Uit documenten die zij openbaar heeft moeten maken, blijkt het tegendeel. VWS overlegt vrijwel nooit met Stivoro of met KWF Kankerbestrijding over beleidszaken. De tabaks-sector echter, praat binnen het ministerie in alle beslotenheid en op het hoogste niveau mee over het beleid. Dat staat haaks op een VN-verdrag dat Nederland ondertekende.

FOUNDATION FOR A SMOKE-FREE WORLD

Correspondence

The Philip Morris-funded Foundation for a Smoke-Free World: tax return sheds light on funding activities

In September, 2017, Philip Morris International, one of the world's largest tobacco companies, set up the Foundation for a Smoke-Free World, with almost US$1 billion of funding over 12 years.[1] The Foundation claims to be an independent scientific body aiming to "accelerate an end to smoking".[2] Yet controversy has surrounded the Foundation since its inception; its claims of legitimacy and independence have been strongly disputed[3,4] and WHO[5] and hundreds of public health organisations globally[6] have taken a strong stance in rejecting collaboration with the Foundation.

on communications (the majority of which was spent on public relations organisations), and $7·03 million on staffing. $47·45 million remain unspent. With only a further $19·2 million of grant funding identified as approved for future payment, the Foundation appears to be struggling to fund research using the money it has received from the tobacco industry.

This greater expenditure on public relations than on research does not match the picture the Foundation paints of itself as a scientific body but instead supports the growing consensus[6] that the Foundation provides a key public relations function for Philip Morris International.

The Foundation claims to be independent but is contracting organisations with long-standing tobacco industry links. In 2018, it spent $5·22 million with Ogilvy Public Relations Worldwide and another

Given the tobacco industry's long history of using public relations firms and external scientists in its manipulation of research,[16,17] the connections between the Foundation and these bodies raise serious concerns about the legitimacy of scientific messages and research originating from the Foundation.

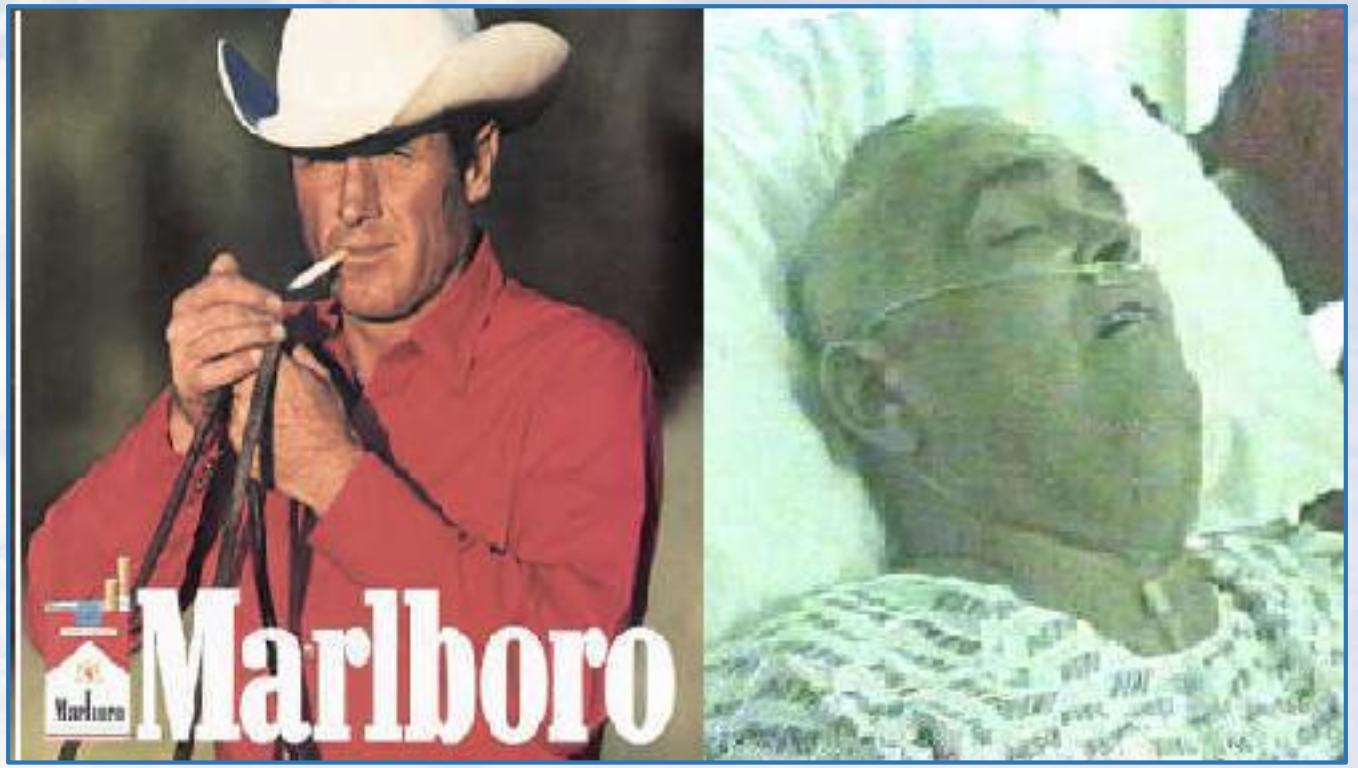

Overall, our findings suggest that as it reaches its second anniversary, the Foundation might be failing. It is seemingly struggling both to recruit independent researchers and to spend its resources on much other than public relations. In line with public rejections from Bloomberg Philanthropies and the Bill & Melinda Gates Foundation,[18] no further funders have materialised. Furthermore, several key staff members left the Foundation in its first 21 months of operation.[18] Now, more than ever, we must reinforce the hitherto successful calls from WHO[5] and the public health
